PROJECT DESCRIPTION

BillerReinhart Structural Group, Inc. performed structural design and prepared construction documents (drawings and specifications) for stainless steel structure supporting the illuminated resin panels (3Form Deco Walls). A maximum wind load was established through calculations for the capacity of the panel structure. BillerReinhart coordinated closely with the fabricator during the drawing preparation process and assembly installation. BillerReinhart performed a site visit during the panel wall installation to view steel components and verify compliance with design documents.
